Nevada's Housing Market | November 2015

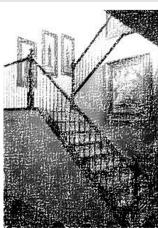

Nevada Statewide Trends

Population: **2,839,099** in 2014 Housing Units: **1,198,907** in 2014

Source: U.S. Census Bureau: State and County QuickFacts

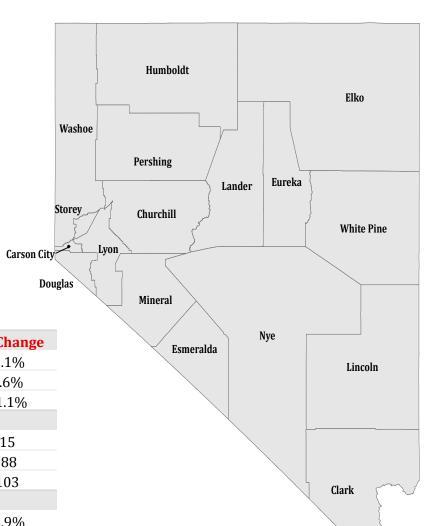

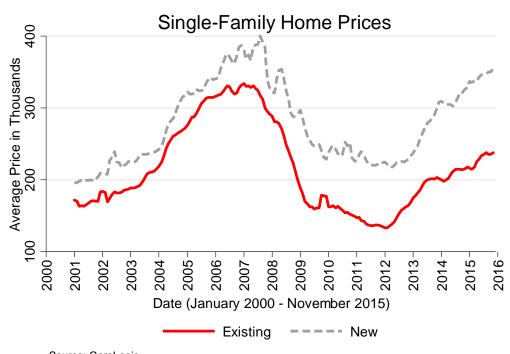

- All three regions in Nevada saw an increase in the distress share. The statewide distress share was down 3 percentage points on a year over year basis in November 2015.
- All three regions in Nevada saw a decrease in existing home sales. However, home sales typically decrease each November. Both Southern Nevada and Northern Nevada also saw a decrease in new home sales.
- Both Northern and Southern Nevada saw increases in home prices. Rural Nevada saw a decrease in only new home prices.
- Both Northern and Southern Nevada saw decreases in single-family starts, which typically happens each November. Both regions saw year over year gains in single-family starts.

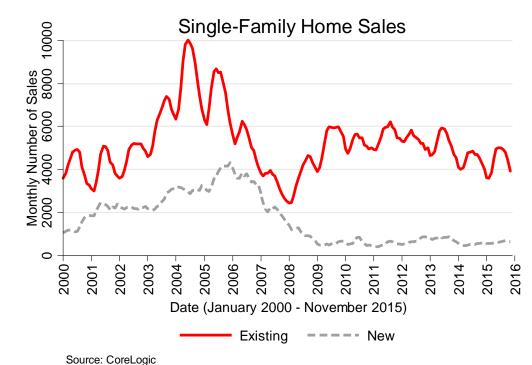

Single-Family Home Sales*		November 2015	M2M Change	Y2Y Change
	New	629	-4.7%	+7.1%
	Existing	3935	-12.0%	-7.6%
	Distress Share	12.8%	+8.2%	-21.1%
Residential Construction				
	Total Starts	1,143	-57	-15
	Single-Family	657	-147	+88
	Multifamily	486	+90	-103
Average Single-Family Sales Price*				
	New	\$354,660	+1.3%	+8.9%
	Existing	\$237,358	+1.1%	+10.4%
	Distress	\$176,170	+2.0%	+6.5%

Note: Series are 3-month weighted moving averages.

Note: Series are 3-month weighted moving averages.

The Single-Family Home Prices figure above shows the three-month moving average price of existing homes and new homes. Existing homes are single family homes that were exchanged from one private owner to another. This includes homes sold by real estate agents, owners, and lenders. New homes are single family homes that were exchanged from a builder to a private owner. The other figure, Single-Family Homes Sales, illustrates the number of those transactions for both existing and new homes. A seasonal pattern is obvious in the Single-Family Home Sales graph, with more home sales during the summer than during the winter.

Note: Series denote the proportion of home sales affordable at median income.

The Housing Affordability figure shows the proportion of home sales that could have been bought by borrowers earning at least the local median income, with a conventional loan. This index was developed by the National Association of Home Builders (NAHB), to provide a benchmark of affordability. The other figure, Nevada Single-Family Homes for Sale, shows the number of homes available for sale at the end of the month. These numbers include new listings that are awaiting a purchasing contract, as well as homes that are under contract and about to sell.

Single-Family Distress Sales is a figure that displays the monthly number of Real Estate Owned (REO) sales and short sales. REO sales are homes that have been repossessed by lenders through foreclosure and then sold in the market. Short sales, on the other hand, are homes that were sold for an amount below the owner's outstanding mortgage balance. Both numbers are three-month weighted moving averages. The other figure, Share of Distress Single-Family Home Sales, tracks the proportion of home sales (including new home sales) that were REO sales or short sales. The long term decline in that share continues, even as the number of such sales remains roughly level, indicating an increasing number of "normal" sales.

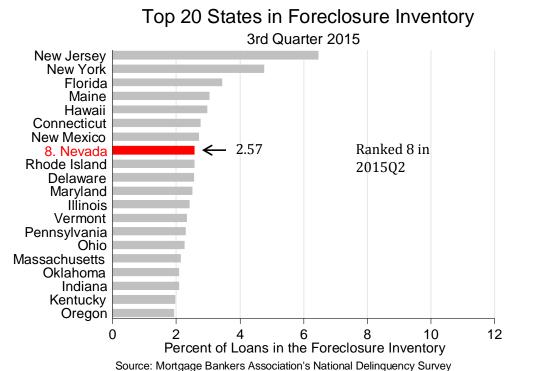

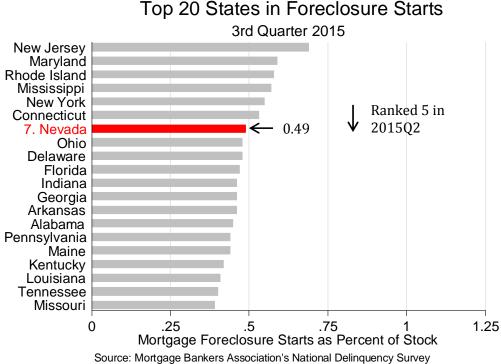

The Foreclosure Trends figure includes two series: the 90+ Days Delinquent series and the Foreclosure Inventory series. The 90+ Days Delinquent series consists of the number of homes that are secured by a loan in default for 90 days or more. This includes homes that are in the process of being foreclosed. The Foreclosure Inventory series consists of homes that have begun the foreclosure process or are in some stage of foreclosure. The other figure depicts what proportion of homes secured by a mortgage have positive equity or negative equity. When a home has a market value at or above its outstanding mortgage balance, it is consider to have positive equity. Otherwise, the house has negative equity.

These two figures are based on numbers gathered from County records by RealtyTrac. The first figure shows the monthly number of Notices of Default and Repossessions. The Notice of Default (NOD) is the initial stage of foreclosure that starts at least 90 days after the homeowner's mortgage default date. Not all homes that receive a NOD will necessarily be foreclosed. There exist other alternatives homeowners can invoke such as a loan modification, deed-in-lieu of foreclosure, and short sale. The other figure, Residential Home Auctions, shows the monthly number of homes that received a Notice of Trustee Sale and underwent a public auction. It includes both the successful and unsuccessful auctions. Those that were unsuccessful revert back to the lender.

These figures rank Nevada nationally on the basis of data provided by The Mortgage Bankers Association's National Delinquency Survey. The Top 20 States in Foreclosure Inventory uses the proportion of outstanding loans that are in the foreclosure inventory - that is, the number of home loans reported to be in some stage of foreclosure divided by the total number of home loans serviced. The Top 20 States in Foreclosure Starts is a ranking that uses mortgage foreclosure starts as a percent of stock. In other words, this is the number of initiated foreclosures divided by the total number of home loans serviced.
